

Amendments to the Claims:

1. **(Currently amended)** A biological information monitoring system comprising a plurality of biological information sensor modules adapted to be attached to the right side and left side of a subject body, said biological information sensor modules each incorporating a biological information sensor for detecting at least one of pulse and blood pressure as biological information and a ~~communication means for communicating~~ communicator configured to communicate said biological information by wireless, wherein at least one of said biological information sensor modules includes a determination means for performing determination of an abnormality by comparing said biological information detected by said biological information sensor in the biological information sensor module itself with biological information sent from the other biological information sensor module through said ~~communication means~~ communicator.

2. **(Cancelled)**

3. **(Currently amended)** The biological information monitoring system set forth in claim ~~2~~ 1, wherein each of said biological information sensors further detects body temperature, and wherein a temperature difference not lower than 0.5°C between the body temperatures measured on the right and left sides of the subject is determined as abnormal by said determination means.

4. **(Currently amended)** The biological information monitoring system set forth in claim ~~2~~ 1, wherein each of said biological information sensors detects at least the pulse, and wherein a pulse difference not less than 7 beats per minute between the ~~body temperatures~~ pulses measured on the right and left sides of the subject is determined as abnormal by said determination means.

5. **(Currently amended)** The biological information monitoring system set forth in claim ~~2~~ 1, wherein each of said biological information sensors detects at least the blood pressure, and wherein a blood pressure difference not less than 10 mmHg between the blood pressure pressures measured on the right and left sides of the subject is determined as abnormal by said determination means.

6. **(Currently amended)** The biological information monitoring system set forth in claim 1, further comprising biological information sensor modules for issuing a warning when said determination means detects an abnormality.

7. **(Currently amended)** The biological information monitoring system set forth in claim ~~1~~ 3, wherein at least one of said biological information sensor modules incorporates a communication means for communicating with the outside to release a determination result of said determination means by wireless and an external electronic device for receiving said determination result outputted from said communication means.

8. **(Currently amended)** The biological information monitoring system set forth in claim ~~1~~ 4, wherein at least one of said biological information sensor modules incorporates a memory for storing at least one of ~~the~~ a determination result outputted from said determination means and the biological information measured by said biological information sensor.

9. **(Currently amended)** The biological information monitoring system set forth in claim ~~6~~ 5, wherein at least one of said biological information sensor modules incorporates a memory for storing at least one of ~~the~~ a determination result outputted from said determination means and the biological information measured by said biological information sensor.

10. **(Original)** The biological information monitoring system set forth in claim 7, wherein at least one of said biological information sensor modules incorporates a memory for storing at least one of the determination result outputted from said determination means and the biological information measured by said biological information sensor.

11. **(Previously presented)** The biological information monitoring system set forth in claim 1, further comprising an electronic device for transmitting data to said biological information sensor module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

12. **(Original)** The biological information monitoring system set forth in claim 6, further comprising an electronic device for transmitting data to said biological information sensor module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

13. **(Original)** The biological information monitoring system set forth in claim 7, further comprising an electronic device for transmitting data to said biological information sensor module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

14. **(Original)** The biological information monitoring system set forth in claim 8, further comprising an electronic device for transmitting data to said biological information sensor module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

15. **(Original)** The biological information monitoring system set forth in claim 9, further comprising an electronic device for transmitting data to said biological information sensor

module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

16. **(Original)** The biological information monitoring system set forth in claim 10, further comprising an electronic device for transmitting data to said biological information sensor module by wireless, so as to perform abnormality determination with reference to said data sent from said electronic device in said determination means.

17. **(Currently amended)** The biological information monitoring system set forth in claim 7, wherein said communication means ~~notifies~~ transmits identification signals for distinguishing individual living subjects each having the biological information sensor module as well as said determination result data by wireless, to allow said external electronic device to figure out said identification signals and said determination result, to thereby ~~to~~ identify ~~said the~~ individual living subjects.

18. **(Currently amended)** The biological information monitoring system set forth in claim 10, wherein said communication means ~~notifies~~ transmits identification signals for distinguishing individual living subjects each having the biological information sensor module as well as said determination result data by wireless, to allow said external electronic device to figure out said identification signals and said determination result, to thereby ~~to~~ identify ~~said the~~ individual living subjects.

19. **(Currently amended)** The biological information monitoring system set forth in claim 13, wherein said communication means ~~notifies~~ transmits identification signals for distinguishing individual living subjects each having the biological information sensor module as well as said determination result data by wireless, to allow said external electronic device to

figure out said identification signals and determination result, to thereby ~~to~~ identify ~~said the~~ individual living subjects.

20. **(Currently amended)** The biological information monitoring system set forth in claim 16, wherein said communication means ~~notifies~~ transmits identification signals for distinguishing individual living subjects each having the biological information sensor module as well as said determination result data by wireless, to allow said external electronic device to figure out said identification signals and determination result, to thereby ~~to~~ identify ~~said the~~ individual living subjects.

21. **(New)** A biological information monitoring system comprising a plurality of biological information sensor modules adapted to be attached to the right side and left side of a subject body, said biological information sensor modules each incorporating a biological information sensor for detecting biological information and a communicator configured to communicate said biological information by wireless, wherein at least one of said biological information sensor modules includes a determination means for performing determination of an abnormality by comparing said biological information detected by said biological information sensor in the biological information sensor module itself with biological information sent from the other biological information sensor module through said communicator, wherein said biological information detected by said biological information sensor is at least one of body temperature, pulse and blood pressure, wherein a temperature difference not lower than 0.5°C between the body temperatures measured on the right and left sides of the subject is determined as abnormal by said determination means.

22. **(New)** A biological information monitoring system comprising a plurality of biological information sensor modules adapted to be attached to the right side and left side of a subject body, said biological information sensor modules each incorporating a biological

information sensor for detecting biological information and a communicator configured to communicate said biological information by wireless, wherein at least one of said biological information sensor modules includes a determination means for performing determination of an abnormality by comparing said biological information detected by said biological information sensor in the biological information sensor module itself with biological information sent from the other biological information sensor module through said communicator, wherein said biological information detected by said biological information sensor is at least one of body temperature, pulse and blood pressure, wherein a pulse difference not less than 7 beats per minute between the pulses measured on the right and left sides of the subject is determined as abnormal by said determination means.

23. (New) A biological information monitoring system comprising a plurality of biological information sensor modules adapted to be attached to the right side and left side of a subject body, said biological information sensor modules each incorporating a biological information sensor for detecting biological information and a communicator configured to communicate said biological information by wireless, wherein at least one of said biological information sensor modules includes a determination means for performing determination of an abnormality by comparing said biological information detected by said biological information sensor in the biological information sensor module itself with biological information sent from the other biological information sensor module through said communicator, wherein said biological information detected by said biological information sensor is at least one of body temperature, pulse and blood pressure, wherein a blood pressure difference not less than 10 mmHg between the blood pressures measured on the right and left sides of the subject is determined as abnormal by said determination means.
